Combating Diesel Bacteria – ATP Measuring of Bacteria

Maritim Consultants AS provides consultancy services for the shipping, offshore and general transport industries in combating and prevention of diesel bacteria in diesel systems. The company provides total solutions for tanks, offshore platforms/rigs, all types of ships and diesel vehicles, including:

- Laboratory analysis (possible confirmation of bacteria).
- Preparation of an action plan depending on the degree of infection and the complexity of the plant.
- Cleaning of tanks and piping systems.
- Disinfecting of tanks and piping systems by treatment with Bio Protect 2.
- Preparing a maintenance plan to avoid future bacteria attacks.
- Sale of fuel oil dip sticks for internal checks on bacteria.

The company has developed and produces Bio Protect 2, which is widely acknowledged in prevention of and combating bacteria in diesel systems. The product, which has been in production since 1985, has proved to be very effective.

Normal dose:

- 1: 2000 in combating diesel bacteria
- 1: 5000 in prevention of diesel bacteria

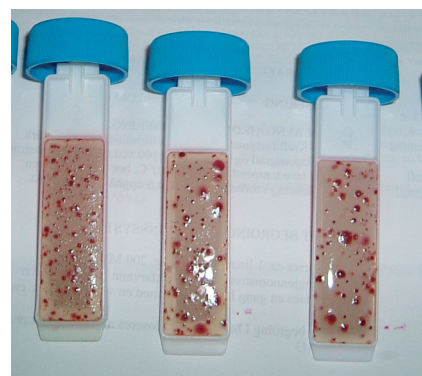

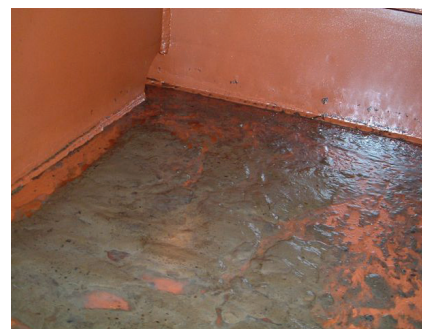

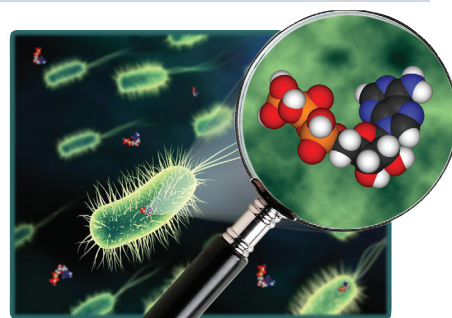

Bio Protect 2 is registered and approved in CHEMS database for Offshore Chemicals (HOCNF)

Bio Protect 2 is sold through dealers throughout Norway, Denmark and Sweden in 100, 250 and 500 ml bottles. 25 litre cans and 200 litre drums are distributed direct from our own warehouse.

Maritim Consultants AS has also developed and produces Bio Kraft. This product is approved by the Norwegian Directorate of Fisheries as a disinfectant agent for use in the fisheries industry. As well as being very effective in disinfection of nets, ropes, quays, vats, fish carriers and equipment generally in the fish farming industry, the product has proved highly effective in eradication and prevention of shells and growth in seawater systems by treatment of the seawater inlet.

Bio Kraft may also be used to eradicate undesirable pests and bacteria in ballast tanks. The product is supplied in 25 litre cans and 200 litre drums.

The products that Maritim Consultants AS supplies and the work the company carries out represent a positive contribution to a better environment.

Test of bacteria growing in diesel, onboard offshore vessel.
